

Product Description

Caitlin Young

August 2022

The climate crisis means that the weather is getting more unpredictable as the years pass by. Whether you are a skier or a snowboarder, prefer on piste or backcountry, unobstructed vision is key, especially when the conditions can change in the blink of an eye.

Odyssey are a pair of smart ski goggles designed to compliment the user's experience on the mountain whilst also keeping them safe. The industry-standard dual lens technology is elevated by the addition of a graphene layer that is heated, when triggered by humidity sensors, to tackle the effects of lens fog. Additionally, fitted ambient LEDs provide navigation indication via GPS that can be controlled and modified through an app.
